GUIDE

Foreword

As businesses look to deliver new and differentiated value to their customers, SAP modernization is driving an exciting wave of change. However, businesswide transformation can be a highly disruptive and challenging process, and so it pays to work with a trusted partner to accelerate innovation. As experts in both SAP and the AWS Platform, Epical combines years of experience with full-stack capabilities to help customers achieve faster time to market and greater ROI.

Drive value and innovation with SAP S/4HANA

As the foundation of many enterprises' digital business processes, SAP modernization has become the fastest way to innovate and deliver differentiated value to customers.

With this in mind, SAP S/4HANA represents a fantastic opportunity for organizations to quickly realize the invaluable capabilities of cloud-based SAP. From AI driven automation and best practice-based workflows, to dramatically improved performance and real-time decision making — SAP S/4HANA enables organizations to transform their SAP landscapes and enable new functionality with ease. With new capabilities, organizations can empower themselves to bridge gaps between disparate business units and establish a distinct competitive advantage.

Customers using SAP S/4HANA report:

30%
shorter delivery lead time

48%
reduction in days sales outstanding

60%
increase in operational efficiency
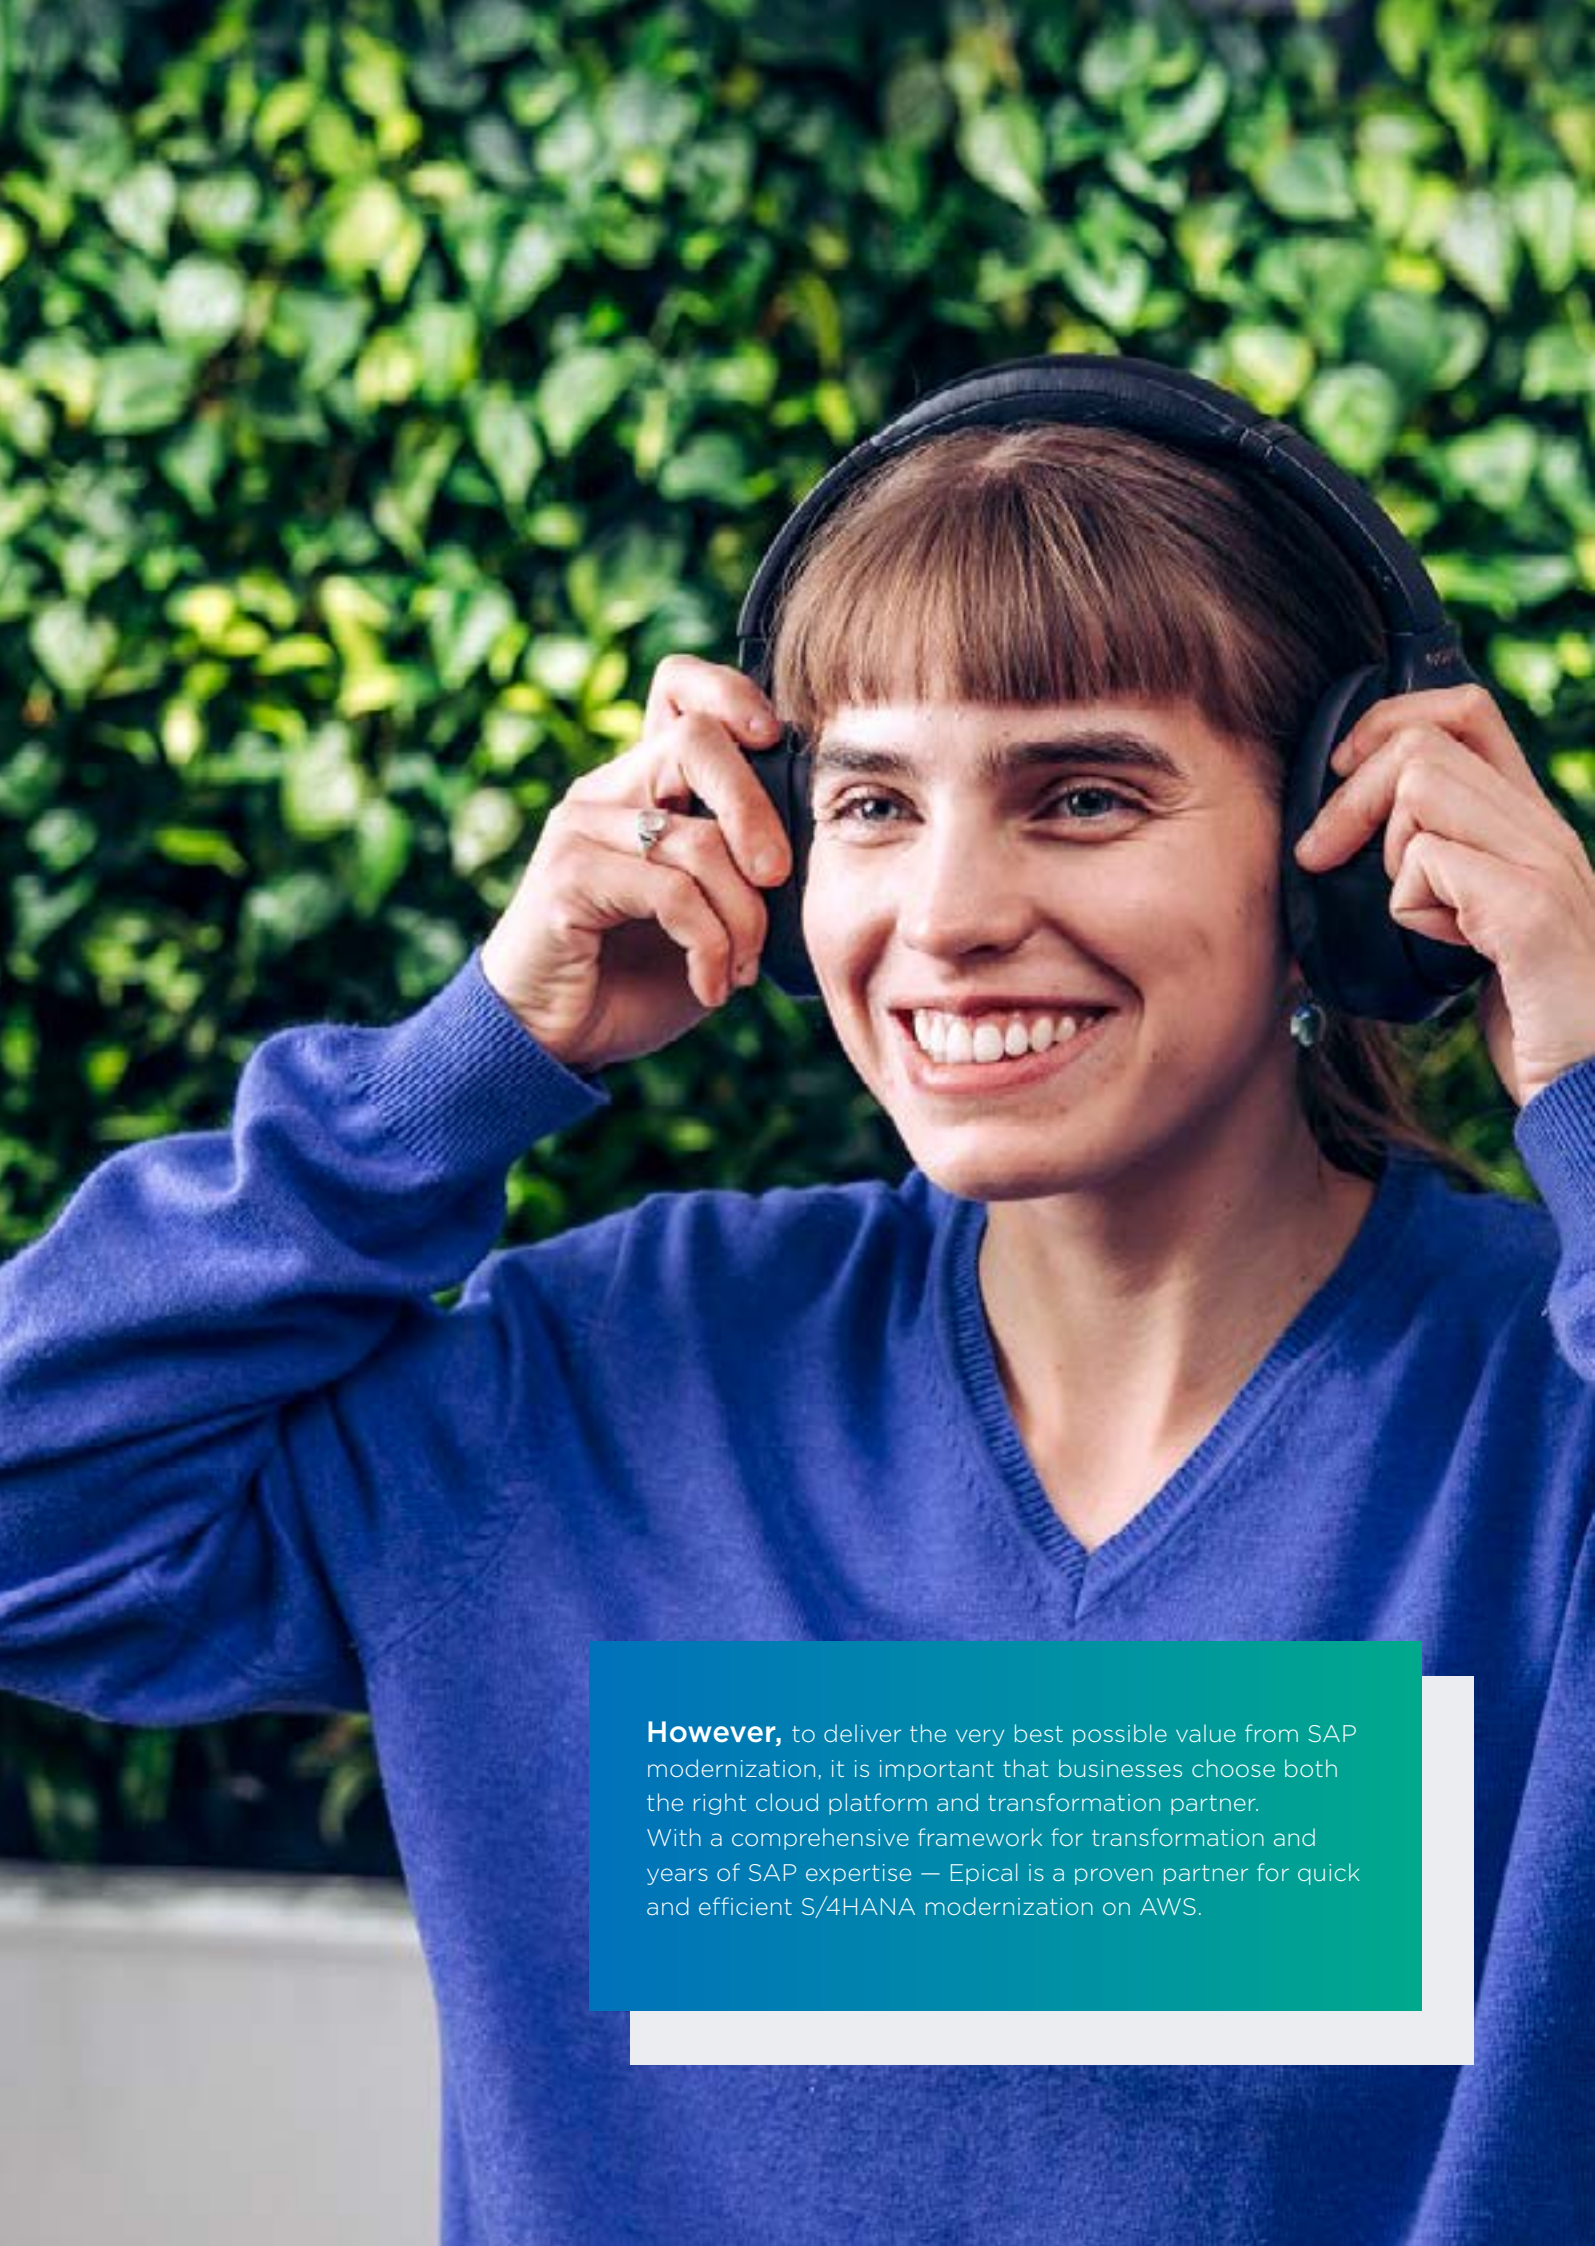

80%
faster report generation

95%
faster material requirements planning

100%
inventory visibility across all locations

Plus many more benefits across their business.

However, to deliver the very best possible value from SAP modernization, it is important that businesses choose both the right cloud platform and transformation partner.
With a comprehensive framework for transformation and years of SAP expertise — Epical is a proven partner for quick and efficient S/4HANA modernization on AWS.

The most proven cloud for SAP workloads

For existing SAP customers, SAP S/4HANA transformation can be a challenging undertaking. With the potential to disrupt mission-critical business processes, organizations must choose a platform that best supports their SAP workload migration, while also laying the foundations for future growth and innovation.

AWS and SAP have been jointly innovating since 2008 to enable customers to extend their SAP systems to more than 200 AWS services on the world's most comprehensive and broadly adopted cloud platform. As it stands, 90% of SAP on AWS services have been developed as a direct result of customer feedback, and 80% of SAP on AWS customers report significant cost savings.

Today, more than 5,000 AWS customers run SAP on AWS — with over half of them deploying SAP HANA-based solutions. However, to maximize the efficiency and rewards of modernization, it pays to work with trusted experts in cloud-based SAP. As an SAP Partner with over 20 AWS certifications, Epical can help you to achieve the proven benefits of SAP S/4HANA on AWS.
