The SAP Landscape

SAP applications are the backbone of digital business processes for many enterprises. However, many manufacturing, retail and wholesale businesses are constrained by operational and IT inefficiencies, as well as a lack of clarity around their supply chains.

Modernizing your SAP workloads is an effective way to mitigate these challenges, and can help you deliver true differentiation and value for your customers.

By working with the right partner, you can get the support you need for an existing SAP solution, or transform your SAP landscapes with S/4HANA.

Your Trusted Partner

Epical is an agile SAP Partner and AWS Partner, that can help you transform your SAP environments on S/4HANA, using best practices to deliver faster time-to-market and accelerated return on investment.

We can also support your existing SAP landscape, and provide a range of expert services, such as S/4HANA and Cloud assessments, implementation projects and application management services.

Who we are:

- A team of more than 500 digital experts
- Over 20 years of experience in the Finnish SAP market
- Specializing in retail, manufacturing and wholesale industries
- Delivered one of the first Nordic S/4HANA implementations in 2018
- Developed one of the first SAP-qualified, partner-packaged solutions in the Nordics for S/4HANA implementation

Our key accreditations:

- SAP Gold Partner
- Certified SAP Partner Center of Expertise (PCOE)
- First Finnish Value-Added Reseller

AWS – The Cloud Platform of Choice

Whether you are looking to lift and shift SAP ERP Central Component (ECC) to reduce costs, migrate to SAP S/4HANA, or innovate with AWS services, AWS offers proven approaches backed by unmatched experience supporting SAP customers in the cloud.

Unmatched experience and industry leadership

- Safeguard your migration and transformation success by running on the same cloud SAP has trusted since 2008, that supports over 5,000 active SAP customers today.

Customer choice and flexibility

- AWS provides the most choice and proven approaches to SAP on cloud success, whether you're looking to lift and shift ECC, migrate to S/4HANA, or innovate and transform with AWS services.

Comprehensive, industry-leading security and compliance

- Gain the control and confidence you need to securely run your business with the most flexible and secure cloud computing environment available today – including more security standards and compliance certifications than any other cloud provider.

Proven cost savings

- Cost savings are the main reason why SAP customers move their workloads to AWS, with 96% reporting a reduction in total cost of ownership (TCO), and an average overall saving of 26%.

Innovate and transform your business, with the broadest set of services

- Combine your SAP investments with over 200 AWS services, including analytics, Internet of Things (IoT), Artificial Intelligence/Machine Learning (AI/ML) and more.

Most reliable and extensive cloud infrastructure

- Protect yourself and your mission-critical business processes from disruption, by taking advantage of the unmatched reliability and extensiveness of the AWS Global Infrastructure.

AWS – The Cloud Platform of Choice

SAP modernization is the fastest way to deliver differentiated value for your customers, and SAP S/4HANA represents a great opportunity for organizations to experience the full capabilities of cloud-based SAP.

With benefits such as AI-driven automation, best practice-based workflows, dramatically improved performance and real-time decision making, SAP S/4HANA enables organizations to transform their SAP landscapes while providing new functionality, with ease.

By the numbers – S/4HANA users report:

30%

shorter delivery
lead time

80%

faster report
generation

48%

reduction in days
sales outstanding

95%

faster material
requirements
planning

60%

increase in
operational
efficiency

100%

inventory visibility,
across all locations

With the right cloud platform and transformation partner, organizations are well-placed to deliver the best possible value from SAP modernization.

With a comprehensive transformation framework and years of SAP expertise, Epical is a proven partner for quick and efficient S/4HANA modernization on AWS.

Expert SAP Services

We offer a wide range of SAP services, backed by our years of experience and expertise:

Assessment Services

Implementation Services

Management Services

Cloud Migrations

License Sales & Support Services

Assessment

Whether you are looking to lift and shift SAP ERP Central Component (ECC) to reduce costs, migrate to SAP S/4HANA, or innovate with AWS services, AWS offers proven approaches backed by unmatched experience supporting SAP customers in the cloud.

Assessment Services

Our SAP Assessments:

Business assessment for S/4HANA

SAP Process Discovery helps to understand how to achieve your business goals with the latest SAP innovations. This tool delivers unique insights into your current operational business process performance and functional usage, based on data from your SAP ERP. It creates benchmarks to compare your operational business performance and usage to your industry peers.

Output: Process discovery report, analysis and recommendations

Technical assessment for S/4HANA

SAP Readiness Check tool provides an overview of the compatibility of the current system with the updated S/4HANA, and the preparation steps that will be required.

Output: Technical impact analysis

Implementation

We'll use SAP Activate to guide your SAP transformation project. SAP Activate is an agile implementation methodology with role-based and detailed implementation tasks. It also includes processes and tools configured to make implementation more efficient.

Our consultants will also work with you to select from a range of core SAP best practice processes linked to business functions and roles, while ensuring these fit your needs.

Implementation Services

Our implementation services:

- Brownfield (conversion from an existing ECC system) projects
- Greenfield (new) implementations
- RISE with SAP S/4HANA Cloud implementations
- Cloud migrations

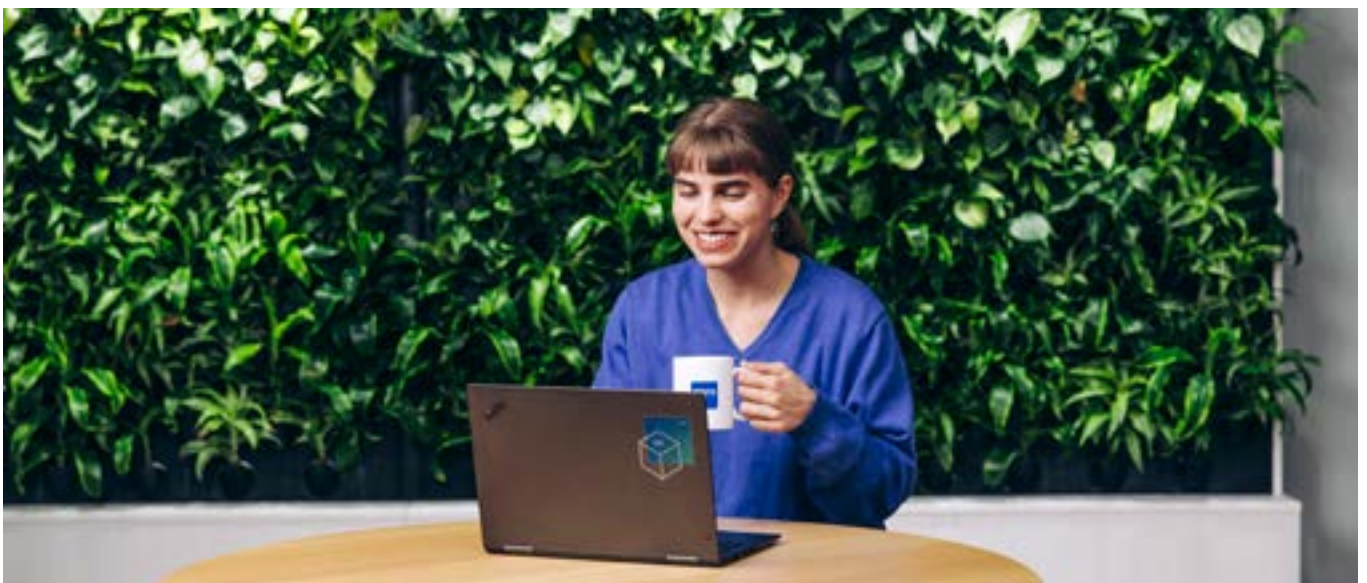

Application Management & Support

The Epical Care for SAP service ensures cost-efficient, secure and reliable SAP operations, by handling all needed management services from the infrastructure to the application layer.

Management Services

It provides:

- Agile SAP development, with a solid, evergreen foundation
 - Customer centric
 - Customer expertise
- Reliable operations
 - Business continuity
 - Single point of contact (SPOC)
 - Information technology infrastructure library (ITIL)
- High-availability maintenance
- 24/7 support from our certified hybrid SAP & Cloud Team

Cloud Migrations

SAP2Cloud migration is the process of moving your SAP applications from your on-premise data center to cloud environment providers, like AWS. By migrating your SAP applications, you can experience agility and scalability in the cloud.

Cloud Migrations

The possibilities are endless. By using Epical's ERP hybrid cloud services and expertise, you can benefit from:

Fast and efficient cloud migrations

- We work together with AWS to execute proven and best practice SAP transitions and transformations to the cloud.

Business innovation

- That combines the integrated value of SAP with new, business-enabling cloud services, such as machine learning and business intelligence, and enabling them to work side-by-side.

Faster time-to-value

- Gain immediate access to hundreds of cloud components that extend the SAP technology, so you can quickly derive increased value from your SAP investment.

Scalability

- Epical-managed hybrid cloud platforms are built for growth, but can also scale down depending on your SAP application and business requirements, to minimize costs and optimize efficiency.

A simplified ecosystem

- Epical's hybrid cloud-powered SAP services offer innovation, scalability, support and operational efficiency from a single point of contact.

License Sales & Support Services

Epical is an SAP Gold partner, first Finnish Value-Added Reseller (license reseller) and holds an SAP partner center of expertise certificate (PCOE)

Cloud Migrations

RISE with SAP S/4HANA, & Epical Takeoff

RISE is SAP's Software-as-a-Service (SaaS) offering, and a comprehensive solution for business innovation. It encompasses a holistic service level agreement, cloud operations and technical support.

RISE provides:

- Cloud ERP for virtually every business need
- Industry next practices and extensibility
- Business platform and analytics
- Business process intelligence
- Outcome-driven services from SAP and partners

Epical Takeoff

Epical Takeoff is an SAP-qualified package for RISE with SAP. Guided by SAP Activate and accelerated by SAP Cloud ALM, it includes the following services:

- Licensing
- Implementation
- Application Management and Support
- Through our Epical Care for SAP service

The Epical Promise

Epical is your local, agile partner. As one of the first Nordic companies to deliver SAP S/4HANA projects, we understand the needs of the local market, and can offer a wide range of comprehensive services for even the most complex project.

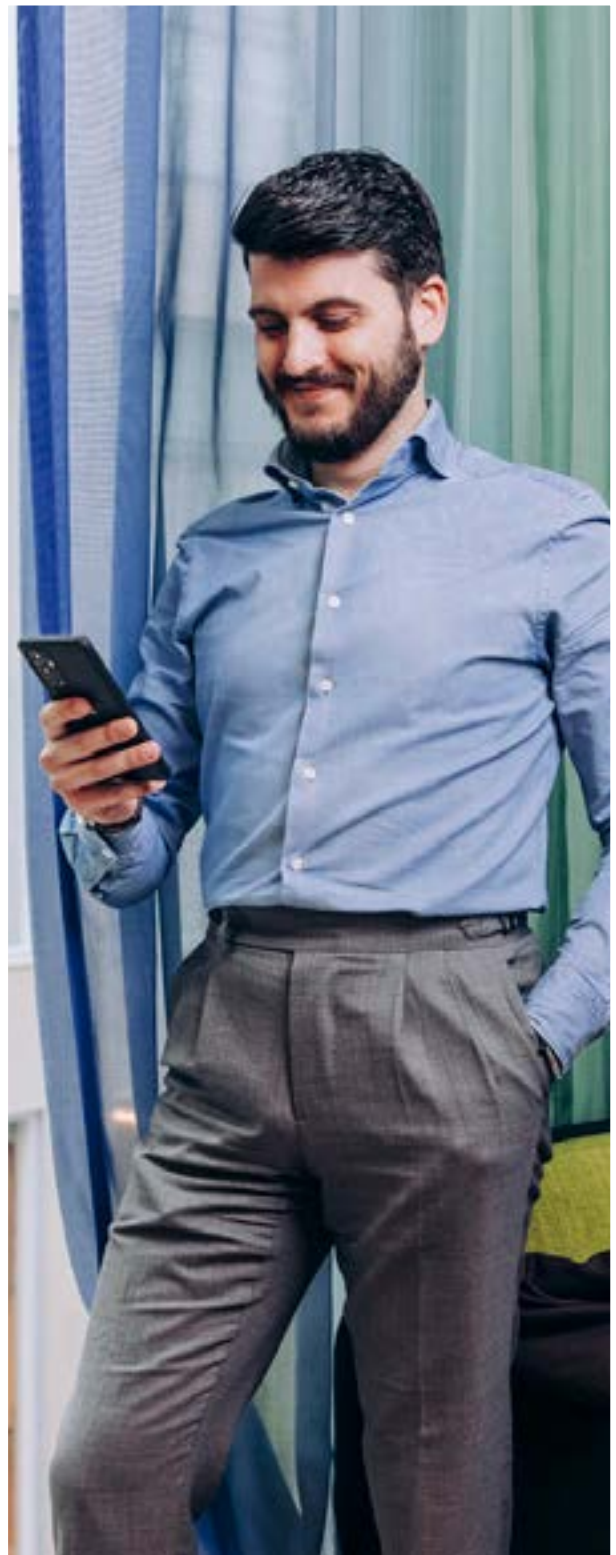

We take pride in delivering on what we promise. We'll help you manage data streams to refine, analyze and use that data safely and wisely, to drive high-quality decision-making.

With Epical, you'll benefit from a long-term partnership based on genuine care and support. Our customers and partners appreciate our breadth and depth of expertise, as well as our fluent cooperation, flexibility and trustworthiness.

It's why
